Project Name	Automated Network Request Management
Team ID	
Maximum Marks	

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Network Administrator managing enterprise connectivity	Provision VLANs, IP addresses , and firewall changes quickly without service delays	The current process depends on multiple teams, approvals, and manual configurations	There is no centralized automation platform to coordinate and execute requests efficiently	Overwhelmed by delays and worried about service downtime impacting users

PS-2	A Business Unit Manager requesting network resources for new applications	Get network services provisioned faster to support project deadlines	Network requests often take several days to complete due to slow manual workflows	Approvals and technical execution are disconnected, causing unnecessary delays	Frustrated because business delivery timelines are affected by infrastructure bottlenecks
